

THE NEW SOFT-BOTTLE-SYSTEM 4.0

HYGIENIC – ECONOMICAL – USER-FRIENDLY

Paul Voormann introduces a new dispenser generation designed for your workplace: Hygienic, Economical, User-Friendly.

So far, companies have been facing a choice in the decision for hand cleaner dispenser systems between good and expensive solutions (e.g. 2l soft bottle systems) and economical but hygienically unfavourable solutions (e.g. open refill dispensers or the direct use from big buckets).

Due to our new 4l soft bottle technology we can combine the hygienic advantages of the introduced 2l soft bottle system with the economical advantages of refill systems or bulk packaging.

HYGIENIC because the wall mounted dispenser itself has no direct contact with the hand cleaner and therefore the dispenser cannot contaminate the hand cleaner (no risk of microbial contamination from the dispenser).

ECONOMICAL because the price per litre of hand cleaner is significantly lower than the price per litre in 2l soft bottles. The price per litre of hand cleaner in the 4l soft bottle lies in the range of refill packaging.

USER-FRIENDLY because no hand cleaner can be spilt while the dispenser is refilled or rather equipped with a new bottle. Furthermore, the content of 4 litres allows long intervals for the bottle exchange (less work for dispenser refill/maintenance).

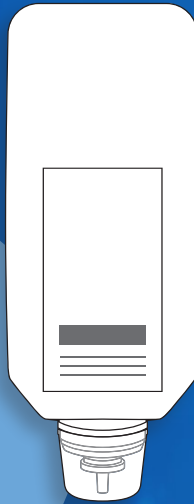

Our dispensers for the 4l soft bottles are available in plastic and in metal (cover either white powder coated or in satin stainless steel).

SOFT BOTTLE 4.0 IN DETAIL

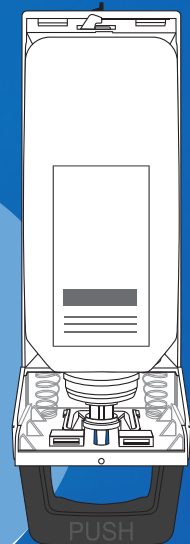

1

Each bottle has an own dosing pump for a peak value of hygiene.

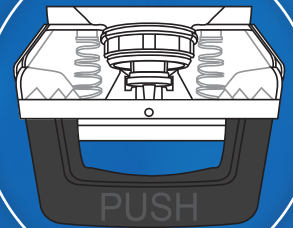

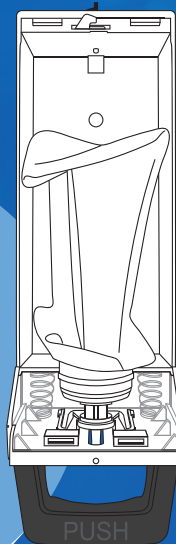

2

The wall mounted dispenser has no direct contact with the hand cleaner. The pumping movement is transmitted from the bush-button to the dosing pump on the bottle.

3

The bottle collapses through a vacuum inside (less volume for waste removal) and has good depletion properties.

You can find more information on our website
or please contact our customer service.

NO DECANTING FROM BIG BUCKETS ANY MORE!

FOR CLEAN & HYGIENIC HANDS

The use of bulk packaging (e.g. big buckets) does not make sense any more due to our user-friendly, time-saving and hygienic operation of hand cleaner dispensers.
